CLAIM AMENDMENTS

(canceled)

- (currently amended) The bone screw according to 1 claim 11, characterized in that wherein a third screwthread portion [[(10)]] extending from the second screwthread portion [[(8)]] has recesses [[(9)]] of constant size.
- (currently amended) The bone screw according to 1 claim 11, characterized in that wherein in the second screwthread 2 portion [[(8)]] and in the third screwthread portion [[(10)]] every 360 several recesses [[(9)]] are formed.
- (currently amended) The bone screw according to claim 3, characterized in that wherein every 360 three recesses 2 [[(9)]] are formed. 3
- (currently amended) The bone screw according to 1 claim 11, characterized in that wherein each recess [[(9)]] extends 2 as a chord toward the screw shank [[(3)]] from the cutting edges [[(7)]] of the second screwthread portion [[(8)]] and of the third screwthread portion [[(10)]] and joins in an arc again the 5 respective cutting edge [[(7)]]. 6

- 6. (currently amended) The bone screw according to
 claim 11, characterized in that wherein the screw shank [[(3)]] has
 a cylindrical form.
- 7. (currently amended) The bone screw according to
 claim 11, characterized in that wherein the screw shank [[(3)]] has
 a tapered form.
- 8. (currently amended) The bone screw according to claim 11, characterized in that wherein the first screwthread portion [[(6)]] comprises three turns.
- 9. (currently amended) The bone screw according to claim 11, characterized in that wherein the second screwthread portion [[(8)]] comprises three turns.
- 10. (currently amended) The bone screw according to
 2 claim 7, characterized in that wherein the lengths of the cutting
 3 edges [[(7)]] of the turns of the second screwthread portion
 4 [[(8)]] are constant.

1	11. (new) A bone screw comprising:
2	an elongated shank having a free end and at an opposite
3	end a screw head;
4 .	a screwthread extending generally helically along the
5	shank from the free end toward the screw head and itself having
6	a first screwthread portion extending from the free
7	end toward the screw head and forming a
8	generally continuous and smooth cutting edge,
9	and
0	a second screwthread portion extending from the
1	first portion toward the screw head and formed
2	of a plurality of turns each formed with at
3	least one outwardly open recess, the recesses
4	being of increasing angular dimension away from
5	the free end.

3

(new) A bone screw comprising: 12. 1 an elongated shank having a free end and at an opposite end a screw head; 3 a screwthread extending generally helically along the shank from the free end toward the screw head and itself having 5 a first screwthread portion extending from the free 6 end toward the screw head forming a generally continuous and smooth cutting edge, a second screwthread portion extending from the 10 first portion toward the screw head and formed of a plurality of turns each formed with at 11 least one outwardly open recess, the recesses 12 being of increasing angular dimension away from 13 the free end, and a third screwthread portion extending from the 15 16 second portion toward the screw head and formed 17 of a plurality of turns each formed with at least one outwardly open recesses, all of the 18 recesses of the third portion being of 19

13. (new) The bone screw defined in claim 12 wherein the angular dimension of the recesses of the third portion corresponds substantially to the angular dimension of that turn of the second portion closest to the third portion.

generally the same angular dimension.
